GENERAL NOTICE No. 275.

DEPARTMENT OF AGRICULTURE.

LOCUST REPORT TO 27/2/29.

Hoppers.—All hopper destruction parties are now withdrawn from all areas.

Flying Swarms.—These are present in the Trans Nzoia, about Ravine, on the Kinangop, in Laikipia, about Lumbwa, and generally moving about with no settled direction of flight.

Requests for spray pumps and arsenic for use on such swarms are received, but as a means of destruction of flying swarms it is inadvisable to use them, and therefore none are issued.

If settlers are able to burn fires under the roosting locusts a number will be destroyed. Some success has been achieved by the use of a bundle of tow tied on to a long stick. The tow is dipped in paraffin and the resulting torch passed under the locusts.

Flame Throwing.—The experimental unit has been withdrawn; much useful work was done, but on account of the fact that swarms are not packing densely, the destruction caused per charge was insufficiently great. It is anticipated that with the advent of damp weather better conditions for destruction, with far less risk to property, will arise.

It is now possible to make an estimate of the extent of hopper destruction achieved during the hopper campaign now ending. It is taken that an area of 162,500 square miles of the Colony was infested with hoppers, and for purposes of calculation we have to assume that each square mile had equal density of infestation.

District.	Sq. miles	Area worked over.	Percentage destruction in area worked over.
Northern Frontier Province	95,500	5,000	90
Kerio	32,000	30,000	80
Kitui	18,250	18,250	97
Voi and Masai	8,000	8,000	98
Coast	4,000	4,000	95
Total	157,750	65,250	

From this calculation it is indicated that of the total hopper infestation of the area of the Colony assumed to be infested, over one-third, or possibly 35 per cent., was destroyed.

It is certain that until the remote areas included in the Northern Frontier Province are rendered accessible and are to some extent developed and brought under surveillance, it will not be possible to take action to effect a high percentage of destruction of a hopper infestation in such areas.

It has been observed that young flying swarms from the first layings appear to fly in a direction which will take them over the country in which subsequent laying by the mother swarms has taken place. It will be interesting to observe whether during this coming season there will again occur a concentration of swarms as appeared to occur at Isiolo late last year.

E. HARRISON,
Deputy Director of Agriculture.

10.
