ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT
FOR THE PROPOSED RESIDENTIAL ESTATE DEVELOPMENT
ON PLOT L.R.NO.21103/1, OFF KIAMBU ROAD, KIAMBU
COUNTY**

INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of Environmental (Impact Assessment and Audit) Regulations, the National Environmental Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the implementation of the proposed residential estate development on plot L.R.No.21103/1, off Kiambu road, Kiambu County.

The proponent (Paramount Chief Estate Limited) of the proposed Residential Estate

Development Project has proposed to put up 454 masonettes units (Phase 2) with associated ancillary infrastructural facilities on Plot L. R. No. 21103/1 which is located in the outskirts of Kiambu Town, Kiambu County. The proposed site measures approximately Sixty Decimal Three Nine (60.39) Hectares.

The following are the anticipated impacts and proposed mitigation measures:

<i>Possible Impact</i>	<i>Mitigation measures</i>
Encroaching on riparian land and local authority way leaves	<ul style="list-style-type: none"> • Comply with the Environmental Management and Coordination (Water Quality) Regulations, 2006 by ensuring no development is within a minimum of six meters and a maximum of thirty meters from the highest ever recorded flood level of River Riara running on the Northern boundary of the project plot. • Comply with The Way leaves Act (Cap. 292) and provide stipulated way leave for sewer line running on the Eastern boundary of the project plot.
Soil erosion, water logging and siltation of river	<ul style="list-style-type: none"> • Terrace, level and rip off compacted areas of the project site to reduce run-off velocity and increase infiltration of storm water into the soil. • Dig trenches and cut off drains to channel runoff into the river. • Proper planning of site excavation works such that a section is completed and rehabilitated before another section

begins.

Health and safety	<ul style="list-style-type: none"> • Landscaping and construction of retention walls to control soil erosion • Surface runoff and roof water shall be harvested and stored in suitable underground reservoir for reuse. • Unattended public access to the construction site should be restricted. • Roster and General Register of all construction workers should be kept within the project site. • Warnings and signs should be placed in appropriate places. • Safety education and training of the construction workers should be emphasized. • Install proper fire management equipments and strategies. • Security personnel should be posted on site at all times.
Noise pollution and excessive vibration	<ul style="list-style-type: none"> • Comply with maximum permissible noise and vibration levels for construction sites as per Second Schedule of the Environmental Management and Coordination (Noise and Excessive Vibration Pollution) (Control) Regulations, 2009. • Prescribe noise reduction measures if appropriate e.g. restricted working hours and transport hours and noise buffering. • Install portable barriers to shield compressors and other small stationary equipment where necessary and locate stationary noise sources as far from existing sensitive receptors as possible. • Limit pickup trucks and other small equipment to minimize idling time and observe a common-sense approach to vehicle use such as shutting up idle engines whenever possible. • Ensure use of well serviced and maintained vehicles and equipment. • All construction works and delivery of materials shall be carried out during the day between 8:00 a.m. and 5:00 p.m.
Air pollution (exhaust emissions and dust)	<ul style="list-style-type: none"> • Use water sprinklers to keep the place wet to control dust. • Vehicles and machineries should be switched off when not in use. • Cover all trucks hauling soil, sand and other loose materials or require all trucks to maintain at least two feet of freeboard. • Pave, apply water when necessary, or apply (non-toxic). • soil stabilizers on all unpaved access roads, parking areas and staging areas at construction site. • Use of electrically operated construction machinery to avoid externalities produced by diesel engines.
Waste management	<ul style="list-style-type: none"> • Solid waste management during construction and operational phases of the project must adhere to the Environmental Management and Coordination (Waste Management) Regulations, 2006. • Provision of facilities for proper handling and storage of construction materials to reduce the amount of waste

caused by damage or exposure to the elements.

- Use of building materials that have minimal packaging to avoid the generation of excessive packaging waste.
- Use of construction materials containing recycled content when possible and in accordance with accepted standards.
- Adequate collection and storage of waste on site and safe transportation to the disposal sites and disposal methods at designated area shall be provided.

Minimizing traffic along access road

- All transportation of construction raw materials and excavated materials are to be conducted at traffic off peak hours only.
- Sensitize truck drivers to avoid unnecessary road obstruction.
- Cover all trucks hauling soil, sand and other loose materials to avoid spillage and dust emissions that may interfere with smooth motoring.
- Work hours shall be restricted to the period between 8:30 a.m. and 3:30 p.m., Monday through Friday, unless approved otherwise.
- When night work is required, work hours shall be 9 p.m. to 5 a.m.

Minimization of energy use

- Audit energy use.
- Identify areas/equipment/systems having minimum energy consumption;
- Buy and install energy efficient equipment and use fluorescent bulbs instead of incandescent bulbs.
- Implement a programme for energy saving in the building's design.

Minimization of water use

- Promote awareness on water conservation and reducing water wastage;
- Quick fixing of leaking taps, pipes and toilet cisterns.
- Sensitizing construction staff to avoid irresponsible water use; and
- Minimize water use in lawns and gardens.

The full report of the proposed project is available for inspection during working hours at:

THE ENVIRONMENTAL MANAGEMENT AND
CO-ORDINATION ACT

(No. 8 of 1999)

THE NATIONAL ENVIRONMENT MANAGEMENT AUTHORITY

ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT
FOR THE PROPOSED MINING OF MAGNESITE ORE
(MAGNESIUM CARBONATE) MINING PROJECT AT
MANGUNGU HILL IN KISENGA VILLAGE, KIMANI SUB
LOCATION, MATHIMA LOCATION, MUTOMO DISTRICT,
EASTERN PROVINCE

INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of Environmental (Impact Assessment and Audit) Regulations, the National Environmental Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the implementation of the proposed mining of Magnesite Ore (Magnesium Carbonate) mining project at Mangungu Hill in Kisenga Village, Kimani sub-location, Mathima location, Mutomo District, Eastern Province.

The Proponent (Pan Africa Chemicals Limited) of the proposed mining of Magnesite Ore (Magnesium Carbonate) mining project at Mangungu Hill in Kisenga Village, Kimani sub location, Mathima location, Mutomo District, Eastern Province has proposed to undertake mining activities for Magnesium Carbonate (Magnesite Ore) at Mangungu Hill in Kisenga Village, Mutomo District. The proponent is proposing to obtain the mineral from the surface to a depth of about 20m. The mining activities will be carried systematically by excavating a small area to the maximum depth before moving to the next area. The mined magnesite ore is to be transported to the Pan Africa Chemicals Limited chemical manufacturing plant in Webuye town where it will be used in the manufacture of Magnesium Sulphate.

The following are the anticipated impacts and proposed mitigation measures:

<i>Possible Impact</i>	<i>Mitigation measures</i>
Conflict resolution	<ul style="list-style-type: none"> • Consult all stakeholders during all project phases to minimize conflicts. • Ensure all operations are planned well in advance and communicated to all stakeholders. • Provide adequate infrastructure including water supply, waste management facilities. • Site activities appropriately by avoiding environmental sensitive areas, historical

	<p>and cultural sites.</p> <ul style="list-style-type: none"> • Site activities by considering public health and safety, ensure dust and gaseous emissions will be within the World Health Organization (WHO) allowable levels. • Establish mutual working relationships with local communities and maintain them throughout the project via the established committee. 		<p>and permitted sites.</p> <ul style="list-style-type: none"> • Place access roads to follow natural topography, and avoid or minimize side hill cuts. • Apply erosion controls relative to possible soil erosion from vehicular traffic and during mining activities (e.g., jute netting, silt fences, and check dams). • Stabilize all areas of disturbed soil using weed-free native shrubs, grasses, and forbs.
Air quality management	<ul style="list-style-type: none"> • Use dust abatement techniques on unpaved, unvegetated surfaces to minimize airborne dust and during earthmoving activities. • Load the mined magnesite ore on to lorries using pans to help in dust management. • Regular Maintenance of heavy vehicles and excavation machinery. • Institute/encourage plant buffer zones along transport route and around mine area to capture dust, dirt and absorb greenhouse gases. • Location of overburden and spoils away from windward sides of hills and slopes. • Conduct annual air quality analysis for area around site. • Cover construction materials, stockpiled soils, and stockpiled refuse if they are a source of fugitive dust. • Minimize drop heights when loaders dump soil /overburden onto dumpsites. 	Impacts on biodiversity	<ul style="list-style-type: none"> • Where possible conduct an ecological mapping exercise to ascertain the species diversity. • Use existing facilities (e.g. access roads, parking lots, graded areas) to the extent possible to minimize the amount of new disturbance. • Ensure protection of important resources by establishing protective buffers to exclude unintentional disturbance. • Minimize the amount of land disturbance and develop and implement stringent erosion and dust control practices. • Develop a plan for control of noxious weeds and invasive plants, which could occur as a result of new surface disturbance activities at the site. • Apply spill prevention practices and response actions in refueling and vehicle-use areas to minimize accidental contamination of habitats. • Reclaim all areas of disturbed soil using weed-free native shrubs, grasses, and forbs.
Water and waste water quality management	<ul style="list-style-type: none"> • Arrest dust to prevent it from being deposited into water bodies. • Provide sanitary conveniences to manage sanitary wastes for the mining crew. • Ensure pit latrine exhausters are licensed and obtain tracking documents. • Position soil heaps away from potential erosion zones or close to water bodies or storm runoff paths. • Build drainage channels on site to direct any storm runoff to used pits. • Do not alter existing drainage patterns, especially in sensitive areas such as erodible soils or steep slopes. • Construct sedimentation structures near disturbed. • areas to impound surface water runoff and sediment. • Re-vegetate areas no longer in use as part of ongoing land rehabilitation. • Closely monitor activities near any potential aquifer recharge areas to reduce potential contamination of the aquifer. 	Wildlife management	<ul style="list-style-type: none"> • Minimise the amount of vegetation disturbance during excavation to reduce impacts on habitats. • Schedule activities to avoid disturbance of resources during critical periods of the day (e.g., night) or year (e.g., breeding season). • Create awareness among workers to be considerate of breeding and mating seasons; relocation of animals with lost habitats etc. • Ensure proper waste management to prevent animals venturing onto site for source of food. • Liaise with KWS for planning for animals escapees from national game reserves. • Ensure fences around the site are well secured.
Impacts on soil, land terrain	<ul style="list-style-type: none"> • Continually rehabilitate used pits through backfilling and re-vegetation. • Do not dispose top soil and store in area with minimal human/animal interference. • Identify unstable slopes and local factors that can cause slope instability (groundwater conditions, precipitation, seismic activity, slope angles, and geologic structure) and avoid excavating in these areas. • Obtain borrow material from authorized 	Health and safety concerns	<ul style="list-style-type: none"> • Provide periodic training and continual safety reminders to all operating staff. • Provide physical support to prevent disaster in mining operations. • Restrict mining during the day only. • Provide appropriate PPEs for related work. • Set up health and safety committee and conduct annual audits. • Conduct a risk assessment for the site. • Provide first Aid kit and supplies. • Develop emergency management procedure.

- Conduct regular medical checks for the staff.
 - Conduct first aid training and fire safety trainings.
- Solid waste generation
- Store and manage excavated material appropriately.
 - Contract a licensed waste handler to dispose any wastes.
 - Provide covered waste receptacles for miscellaneous waste on site.
 - Create awareness and enforce among workers proper waste disposal.
 - Ensure excavated soils and rocks are reused for pit backfilling.
- Increased noise and traffic
- Use existing roads to the extent possible.
 - Limit traffic to roads indicated specifically for the project.
 - Limit use of unimproved roads to emergency use only.
 - Limit mine-related vehicle traffic on public roadways to off-peak commuting times to minimize impacts on local commuters.
 - Consult with local planning authorities regarding traffic, in general and specific issues such as creating awareness of increased traffic in the area.
 - Limit noisy activities to the least noise-sensitive times of day (weekdays only).
 - All equipment should have sound-control devices no less effective than those provided on the original equipment.
 - Muffle and maintain all construction equipment used.
 - Notify nearby residents in advance when extra noisy activities are to be undertaken.
 - To the extent feasible, route heavy truck and supporting mining activities away from residences.
 - Establish vegetation zones around site to act as sound buffers.
 - Conduct regular noise mapping at sensitive receptor sites for monitoring compliance.
- Training and capacity building needs
- Develop & display Environment Management Policy.
 - Develop self audits plan for environmental management.
 - Undertake environmental management training.
 - Promote HIV/AIDS awareness among employees.
 - Develop employees skill through training in materials management.
