ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR THE PROPOSED OLKALAU TOWN SEWERAGE PROJECT IN NYANDARUA COUNTY

INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, Rift Valley Water Services Board, is proposing to construct Olkalau town sewerage project. The sewer system involves construction and maintenance of approximately 14.296 Km of sewer lines of various sizes ranging from 160mm to 375mm uPVC pipes and socket flexible jointed construction of 1050mm to 1200mm manholes and other auxiliary works. The works also involve construction of 6 ponds with total capacity of 41,730 m³ and Waste Water Stabilization Pond sewerage treatment system at Ol' Kalou Township at the County Government waste management site.

The following are the anticipated impacts and proposed mitigation measures:

<i>Impacts</i>	<i>Proposed mitigation measures</i>
High demand of Raw material	• Source building materials from local suppliers who use environmentally friendly processes in their operations.
Excavation, Removal and disturbance of flora	• Properly demarcating the project area to be affected by the construction works.
	• Strictly controlling construction vehicles to ensure that they operate judiciously and over designated areas to minimize destruction of vegetation.
	• Re-establishing vegetation in some parts of the disturbed areas through implementation of a well-designed landscaping programme by planting of ornamental trees, flowers and hedges.
	• Carry out all excavation works as instructed in the approved architectural plans for the sewer plant and trunk.
Soil erosion	• To the greatest extent possible, plan to do the construction work during the short rains to minimize the exposure of loose soil to surface runoff.
	• As much as it's practically possible, phase site clearance so as to minimize the area of exposed soil at any given time.
	• Back fill and compact excavated areas as soon as the laying of trunks is done.
Construction wastes	• Covering all trucks hauling soil, sand and other loose materials and/or require these trucks to maintain at least two feet of freeboard.
	• Watering all dust-active construction areas to suppress dust emissions.
	• Paving or applying water when necessary or applying non-toxic soil stabilizers on all unpaved access roads and parking areas.
Noise and vibrations	• Sensitization of truck drivers to switch off vehicle engines while offloading materials.
	• Instructing truck drivers to avoid running of vehicle engines or hooting especially when passing through noise

sensitive areas such as religious areas, hospitals and schools.

- Properly servicing and maintaining and tuning construction machinery such as generators and other heavy duty equipment to reduce noise generation.
- Placing noisy equipment in sound proof rooms or in enclosures to minimize ambient noise levels.
- Planning the construction work to take place only during the day when the neighbours are also at work.
- Maintaining reasonable working hours so as to reduce the number of complaints concerning noise from the workers and neighbours.
- Operating shorter shift periods for workers who come in direct contact with high concentrations of noise or other hazards.
- Posting notices at the construction site informing the public of the construction activities, time and day.
- Providing ear protective devices to prevent high frequency noise emitted by the high frequency machines during construction phase.
- Adherence to Noise And Excessive Vibration Pollution (Control) Regulations, 2009.
- To the greatest extent possible, plan to do the construction work during the short rains to minimize the generation of dust.
- Workers on the site should be issued with dust masks during dry and windy conditions.
- Covering all trucks hauling soil, sand and other loose materials and/or require these trucks to maintain at least two feet of freeboard.
- Watering all dust-active construction areas to suppress dust emissions; and
- Paving or applying water when necessary or applying non-toxic soil stabilizers on all unpaved access roads and parking areas.
- Properly plan the transportation of materials and ensure that vehicle fills are increased so as to reduce the number of trips done and the numbers of vehicles on the roads.
- Adherence to Air Quality Regulations, 2014.

Nuisance dusting

Occupational health and safety

- Well stocked first aid box which is easily available and accessible should be provided within the premises.
- Implement all necessary measures to ensure health and safety of workers and the general public during operation of the housing project.
- Firefighting equipment such as fire extinguishers should be provided at strategic locations such as stores and construction areas.
- Regular inspection and servicing of the equipment must be undertaken by a reputable service provider and records of such inspections maintained.
- Comply with the provisions of OSHA 2007.

The full report of the proposed project is available for inspection during working hours at:

THE ENVIRONMENTAL MANAGEMENT AND CO-ORDINATION ACT

(No. 8 of 1999)

THE NATIONAL ENVIRONMENT MANAGEMENT AUTHORITY

ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR THE PROPOSED KABARNET TOWN SEWERAGE PROJECT IN BARINGO COUNTY

INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The Proponent, Rift Valley Water Services Board is proposing to construct Kabarnet Town Sewerage Project in Baringo County. The sewerage system will consist of:

- Concrete trunk sewer network with a total length of 19,130.25m;
- Sewer Treatment (anaerobic, facultative and maturation) ponds.

The ponds will treat effluents to meet relevant standards before discharge into the environment and safely dispose any accumulated sludge.

The following are the anticipated impacts and proposed mitigation measures:

Impacts	Proposed mitigation measures
Habitat disturbance.	<ul style="list-style-type: none"> • Clearly mark out construction sites and restrict construction activities to the marked areas. • Seek approval from NEMA for any new material extraction sites. • Carry out re-vegetation of disturbed areas where possible.
Loss or change in vegetation cover Illegal logging restoration impact	<ul style="list-style-type: none"> • Felling of any tree should be done only with consent from the Baringo County Government and KFS. • The Contractor should as much as practical not interfere with endangered species such as <i>Prunus africana</i> and <i>Vitex kinesis</i> species which are considered as vulnerable under the Wildlife Conservation and Management Act, 2013. Where it is necessary to clear these species, clearance shall be sought from KFS and KWS.
Soil erosion	<ul style="list-style-type: none"> • The contractor must implement erosion control measures to avoid erosion in areas that are prone to erosion, e.g. steep slopes and drainage lines. • Construct soil conservation measures at stockpiled sites.

Ground and surface water pollution	<ul style="list-style-type: none"> Any quarries and borrow areas exploited for the project must be reinstated and rehabilitated. All excavation works must be properly backfilled and compacted. Implement Standard Operating Procedures (SOPs) for working near water, including checks on equipment condition (especially leaks of oils, fuel, hydraulics), refueling protocols (at safe location away from water, availability of spill kits and knowledge of their use, and emergency spill procedures). Apply standard best practice for site sediment control procedures (e.g. settling ponds) to minimize sediment in site drainage waters returning to the river. Ensure all staff and workers are fully aware of the limits to the site for each activity, SOPs, and emergency procedures. All grey water runoff or uncontrolled discharges from the site/working areas (including wash down areas) to water courses should be contained and properly channelled. Water containing such pollutants as cements, concrete, lime, chemicals and fuels shall be discharged into a conservancy tank for removal from site. Potential pollutants of any kind and in any form shall be kept, stored and used in such a manner that any escape can be contained and the water table not endangered. Wash areas shall be placed and constructed in such a manner so as to ensure that the surrounding areas (including groundwater) are not polluted. Spill/pollution emergency response plan shall be developed for site works. 	<ul style="list-style-type: none"> Regular watering of dusty roads should be maintained during this phase. Any damage to public roads should be made good to the satisfaction of the responsible road authority immediately it occurs and at the latest before the end of the contract. After use, all temporary access routes on cultivated land or pasture (grassland) should be restored to their previous condition or better. This will involve the removal of all non-soil material and the replacement of topsoil if this has been destroyed or removed. Limiting truck speeds to avoid stirring up the dust. Ensure all fuel powered equipment and vehicles are in good working order through regular maintenance.
		Occupational Health and Safety
		Solid waste
Noise and vibrations	<ul style="list-style-type: none"> Noise levels shall be kept within acceptable limits and the Contractor should not permit high noise activities. Workers exposed to prolonged excessive noise levels will be required to wear ear muffs. Equipment should be maintained regularly to reduce noise resulting from friction. Noise levels at the construction site boundary should be kept within acceptable limits of 60 dB(A) during the day and 35 dB(A) during the night as stipulated within the Environmental Management and Coordination (Noise and Excessive Vibration Pollution) (Control) Regulations, 2009. Limit idling time of pickup trucks and other small equipment and observe a common sense approach to vehicle use and encourage workers to shut off vehicle engines whenever possible. 	<ul style="list-style-type: none"> Contractor to establish a comprehensive Health and Safety Policy and safety management plan incorporating training and awareness. Ensure the site is registered as a works place with DOSHS. Provide appropriate and adequate PPE to all workers and enforce usage. Implement the specified H&S program throughout the construction period. Establish an emergency response procedure and display on all work areas; Provision of fire-fighting equipment available at the workers camp. Prepare an integrated waste management plan informed by all the possible waste streams. Contractor shall ensure segregation of hazardous from non-hazardous wastes and provide appropriate receptacles for their handling on site. The Contractor should not burn any wastes on site or dump in open pits. Final disposal of the waste should be done at a location approved by Resident Engineer in accordance with the waste management plan after consultation with the relevant stakeholders, including the local community.
		Waste water
Air pollution	<ul style="list-style-type: none"> Limit clearance of vegetation within the construction site to ensure that he cover act as barriers to the dust. The removal of vegetation shall be avoided until such time as clearance is required and exposed surfaces shall be re-vegetated or stabilised as soon as practically possible. 	<ul style="list-style-type: none"> All grey water runoff or uncontrolled discharges from the site/working areas (including wash down areas) to water courses should be contained and properly channelled. Potential pollutants of any kind and in any form shall be kept, stored and used in such a manner that any escape can be contained and the water table not endangered. Wash areas shall be placed and constructed in such a manner so as to ensure that the surrounding areas (including groundwater) are not polluted. Spill/pollution emergency response plan shall be developed for site works Vehicle maintenance should be done on purpose-built impervious concrete platforms with oil and grease traps; Standard operating practices for refueling mobile equipment such as a
		Oil spills

minimum 15m from any water channel should be practiced.

- Operator training is an important aspect of preventive approach and should be put into use before assignment or in the course of duty.
- All above surface tanks should be bounded and mounted on paved surfaces.
- Ensure that all equipment are in good condition, clean and free from leaks;
- Oil spill containment and cleanup equipment should be kept at the contractor's camps.

The full report of the proposed project is available for inspection during working hours at:
