INVITATION OF PUBLIC COMMENTS

Pursuant to Regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the

National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, Al-Sherman Limited, is proposing to carry out salt works on a section of L.R. No. 13536. This parcel of land is located in Kilifi County, Magarini Sub-county, Fundi Issa Location, Marereni Sub-location, Adu Ward at Musumarini Area.

The following are the anticipated impacts and proposed mitigation measures:

<i>Impacts</i>	<i>Proposed Mitigation Measures</i>
Vegetation clearing	<ul style="list-style-type: none"> Vegetation to only be cleared from the actual areas where the salt ponds will be constructed and associated support infrastructure. Large trees such as the Baobab within the project area to be preserved. Management to plant more trees and other vegetation in open areas. Management to support tree planting in areas outside the proposed project site such as in schools, health centers, compounds of religious institutions.
Air quality	<ul style="list-style-type: none"> Water sprinkling on dusty surfaces to be done to minimize fugitive dust. Flooding with water opened areas for construction of salt pans to be done during dry spells and windy conditions to reduce clouds of dust. Ensure construction equipment are properly serviced and maintained to minimize noise and vibration.
Soils disturbance	<ul style="list-style-type: none"> Minimize soil erosion by planting vegetation on all open areas of the proposed project site where salt pans will not be constructed.
Noise and vibration from site equipment use	<ul style="list-style-type: none"> Ensure construction equipment are properly serviced and maintained to minimize noise and vibration.
Generation of effluent from raw salt washing	<ul style="list-style-type: none"> Provide for adequate capacity settling ponds for handling effluent from salt washing. Effluent from salt washing to be channeled into settling ponds where sediments settle down and the resulting clear saturated brine recycled back to salt washing. Scoop out settled sediments from the settling ponds and use them to fill low-lying areas with the salt works.
Blockage of free flow of tides within the creek from constructed dykes	<ul style="list-style-type: none"> The design of the salt works should as much as possible avoid construction of perimeter dykes that are parallel to the coastline. Avoid construction of dykes at or close to the high water mark.
Increased waste generation	<ul style="list-style-type: none"> Recycle and reuse waste including water. Exercising appropriate waste handling and good housekeeping practices and procedures. Strict Adherence to Waste Management Regulations, 2006.
Increased electricity demand and use	<ul style="list-style-type: none"> Water pumps at the pump stations to be solar energy power as opposed to drawing energy from the grid.
Increase fresh water demand and use	<ul style="list-style-type: none"> The proponent should not source freshwater to be used at the salt works from local community water wells.
Solid waste generation	<ul style="list-style-type: none"> All solid waste to be generated to be handled and disposed as provided for in the Environmental Management and

Impacts

Proposed Mitigation Measures

	<p>Coordination (Waste Management) Regulations 2006.</p> <ul style="list-style-type: none"> Waste oil and any other liquid waste to be generated to be handled and disposed as provided for in the Environmental Management and Coordination (Water Quality) Regulations 2006.
Labour Influx	<ul style="list-style-type: none"> First priority to be given to people from the local community when recruiting workers for the operational phase. Unskilled and semi-skilled labor who will be hired during the operational phase of the proposed salt works to be strictly sourced from the local community. During the operational phase of the proposed salt works, required skilled labor to be sourced out of the local community after exhausting those available in the local community.
Blockage of local ephemeral streams	<ul style="list-style-type: none"> The design of the salt works should ensure that no local ephemeral stream or any other surface water body flowing through sections of the proposed project site is blocked or its natural course altered. Project proponent to ensure that the proposed project to comply with all the provisions of the Water Act 2016 and its relevant subsidiary legislations.
Blockage of community beach access routes	<ul style="list-style-type: none"> All the community beach access road that pass through sections of the proposed project site to be identified and appropriately documented. Design of the proposed salt works to factor in the access roads and ensure that they are not interfered with. In a case where an existing community beach access road has to be altered consultations with the local community together with the local leadership to be done, first to obtain consensus prior to the change.

The full report of the proposed project is available for inspection during working hours at:

- Director-General, NEMA, Popo Road, off Mombasa Road, P.O. Box 67839-00200, Nairobi.
