FOR THE PROPOSED IMPROVEMENT OF THE EXISTING LOPII
- LOKORI - ELELEA (50KM) ROAD AND NEW
CONSTRUCTION OF ELELEA - KOKOIT - BARRIER (70KM)
ROAD WITHIN TURKANA EAST SUB-COUNTY, TURKANA
COUNTY

INVITATION OF PUBLIC COMMENTS

Pursuant to Regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, Olsuswa Energy Limited, is proposing the spot improvement (first part) of Lopii-Lokori-Eleleam (50km) road and construction of a new gravel road (second part) from Eleleam-BARRIER (70 km). The first part of the project road is approximately 50 km long. It starts at Lopii village along C46/C113 road, then proceeds

eastwards through Lokwamosing, Lokori, Morulem, Lokwii, Lotubae and Elelea towns. The second part of the project road is approximately 70 km long. It starts at Elelea, crosses Kerio river and proceeds North-Eastwards to the Barrier Volcanic Complex (BVC). The existing road from Lopii-Elelea is characterized by long and short straights, tight curves, and has not been engineered to the required standards for class C and D classified roads. The proposed alignment from Elelea-Kokoit traverses a fair topography and crosses three major water courses.

The following are the anticipated impacts and proposed mitigation measures:

<i>Impacts</i>	<i>Proposed Mitigation Measures</i>
Construction material sourcing	<ul style="list-style-type: none"> • Obtain appropriate authorization and licenses for the use of the borrow pits and quarries before commencing activities. • Carry out inspection of each of the sites' soil stability before excavation. • All borrow pit sites shall be clearly indicated on a plan and approved by the Engineer. • Borrow pits and quarries to be located more than 100 metres from watercourses to minimize storm water runoff into watercourse and mitigate potential conflicts. • Give 14 days' notice to nearby communities of the intention to begin excavation in the borrow pits or quarries. • Prepare a material extraction plan prior any work on the quarries and borrow pits is commenced. • Where material sites are close to settlements, cordon off the quarry and borrow areas to keep livestock, wildlife and children out. • All borrow pits and quarries must be decommissioned when work on the road is over, hence a rehabilitation plan MUST be prepared by the contractor as part contract agreement with the land owners and NEMA licensing. • Stockpile topsoil on site and use during rehabilitation of the borrow pits and quarries. • In case of blasting: • Obtain a current and valid authorization from the Department of Mines and Geology prior to any blasting activity. • A qualified and registered blaster shall supervise all blasting and rock-splitting operations. • Develop a safety policy on site. • Upon completion of works, the borrow areas and quarries should be graded and backfilled with topsoil that formed the overburden. Since the project area is largely semi-arid and may not support planted seedlings, the area should be cordoned off and natural regeneration allowed to occur.
Damage to landscape	<ul style="list-style-type: none"> • Ensure that intake area is landscaped and that a 50m buffer zone along the river is maintained by planting of water friendly trees and grass along the river embankment and on both sides of the intake structure, construction of river embankment structures, as well as re use of soil from trenching activities as a backfill.
Sedimentation and contamination of Kerio river from construction activities	<ul style="list-style-type: none"> • Develop and implement a site construction waste and wastewater management plan to minimize environmental damage from construction activities. • Install secondary containment measures in

<i>Impacts</i>	<i>Proposed Mitigation Measures</i>
Changes in biological communities along the road in favour of invasive species	<ul style="list-style-type: none"> • areas where fuels, oils, lubricants etc. are stored and loaded or unloaded, including filling points. • Implement soil erosion control measures at construction sites. • Replant or take measure to encourage recolonization by native vegetation in disturbed areas immediately following construction. • Implement 'nuisance' plant monitoring programme along the road.
Ecosystem modification and land degradation from an increase in human activities in Loru Range	<ul style="list-style-type: none"> • The road cross-section can be modified to reduce impacts on the environment, e.g. by using narrower widths, lower vertical alignments, smaller cuts and fills, flatter side slopes, and less clearing of existing vegetation. • To minimize collision of wildlife with vehicles, provision of longer sight lines that allow adequate reaction time for drivers could also be provided. • Culverted crossings to be designed with the needs of migratory aquatic species in mind. • Implement education programmes for construction workers on, inter alia: respect for wildlife and vegetation, avoidance of fires and accidental damage, and generally minimizing the footprint of the construction camp and work area. • Replant or take measure to encourage recolonization by native vegetation in disturbed areas immediately following construction. • Implement 'nuisance' plant monitoring programme along the road. • Create alternative valuable habitat areas elsewhere to compensate for unavoidable loss of similar resources in the project area.
Soil loss resulting from erosion and carting to spoil	<ul style="list-style-type: none"> • Minimize the area of ground clearance. • Avoid sensitive alignments, such as those which include steep hillsides. • Balance filling and cutting requirements through route choice, to avoid the production of excess spoil material and reduce the need for borrow pits. • Avoid the creation of cut slopes and embankments which are of an angle greater than the natural angle of repose for the local soil type. • Use slope retention/protection techniques such as gabions, intercepting ditches etc.
Soil contamination from pollution incidences	<ul style="list-style-type: none"> • Implementation of a project specific Reinstatement Plan which includes mitigation for impacts to soils. • Implementation of spillage prevention and control measures for hazardous materials in use and storage at sites.
Environmental pollution and creation of health and safety hazards from poor management of wastes during construction	<ul style="list-style-type: none"> • Land-fill spoils as much as possible within the sites or identified fill areas. • Felled trees, shrubs and stumps can be isolated for collection by locals as firewood. • Organic wastes can be composted on site. • Provide pit latrines at the camp(s) and construction sites for use by workers.

Impacts

Proposed Mitigation Measures

- Vehicle maintenance to be done off-site (at the construction camp's garage/workshop or commercial garage) and wastes (used oil, oily rags, cans and used parts) disposed in a designated area.
- Ensure that construction materials left over at the end of construction are used elsewhere rather than their disposal.
