PURSUANT to section 59 of the Environmental Management and Co-ordination Act, 1999, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above-proposed project.

The proponent, National Youth Service intends to construct an earth dam with a designed capacity of 265,001.89M³. The dam will consist of a core trench formed on a hard rock to avoid settlement, toe drain and sand filter to prevent piping, slope of 1:2.5 d/s and 1:3 u/s for slope stability, an off-take pipe of 100mm diameter anchored on 20/25 anchor blocks, wearing course on the embankment crest of 300mm and a spillway to drain flood water which is lined with riprap stones. The other parameters of the dam include embankment fill 78,278.94m³, height 12.50m, spillway width 15m, spillway length 18m, associated facilities and amenities. The project will be located between Goliba and Kithimani Town, Yatta Sub-county, Machakos County.

The following are the anticipated impacts and proposed mitigation measures:

<i>Environmental Impacts</i>	<i>Mitigation Measures</i>
Loss of flora and fauna	<ul style="list-style-type: none"> Where possible, clearing of vegetation more so the indigenous trees need to be avoided during construction as much as possible. Where clearing of trees is inevitable, the land should be landscaped and planted with as much indigenous vegetation as possible so as to restore the lost biodiversity. The extent of clearing within the work stations should be clearly marked. Instruct all construction workers to restrict clearing to the marked areas and not to work outside defined areas. Avoid introduction of invasive alien species in the landscaping activities.
Siltation and sedimentation of the dam	<ul style="list-style-type: none"> Construction of a check dam before the main dam. Scraping the dam bed periodically. Controlling erosion in the dam catchment area. Planting grasses and other soil conservation measures in the river bank and riparian area.
Reservoir induced seismicity causing earthquakes	<ul style="list-style-type: none"> Geophysical investigations to check for faults that could lead to leakages within the dam. Grouting to seal any observed faults in the walls of the dam. Earthquake resilient design for the reservoir.
Occupational health and safety	<ul style="list-style-type: none"> There should be adequate Personal Protective Equipment (PPE) to all workers and they should be worn all the time. There should be adequate provision of the requisite sanitation facilities for human waste disposal.

Reduced water flow and silt deposition in rivers	<ul style="list-style-type: none"> Workers should receive requisite training especially on the operation of the There should be adequate warning and directional signs. Provide clean drinking water for the employees. Develop a site safety action plan detailing safety equipment to be used, emergency procedures, restriction on site, frequency and personnel responsible for safety inspections and controls. A sign board warning on HIV/AIDS, drugs and alcohol abuse be displayed at the construction camp sites. The campsites and their facilities need to be constructed at sites carefully selected away from the sensitive areas. Train workers on the use of firefighting equipment. Provide First Aid kit within the construction site. Recording of all injuries that occur on site in the incident register, corrective actions for their prevention are instigated as appropriate. Introduction of biological control agents to reduce vector populations.
Noise pollution	<ul style="list-style-type: none"> Use of equipment that is fitted with noise reduction devices such as mufflers. Construction workers operating equipment that generates noise should be equipped with noise protection equipment. Avoid working at night. Avoid unnecessary hooting and honking.
