INTERNATIONAL TRADE ADMINISTRATION COMMISSION OF SOUTH AFRICA

TERMINATION OF THE INVESTIGATION INTO THE ALLEGED DUMPING OF CHOPPED STRAND MATS ORIGINATING IN OR IMPORTED FROM BRAZIL

On 12 May 2006, the International Trade Administration Commission of South Africa (Commission) formally initiated an investigation into the alleged dumping of chopped strand mats originating in or imported from Brazil and the People's Republic of China. Notice of initiation of the investigation was published in Notice No.608 in Government Gazette No.28798 dated 12 May 2006.

The investigation was initiated after the Commission considered an application by Owens Corning SA Pty Ltd (Applicant), alleging that chopped strand mats originating in or imported from Brazil and the PRC were imported into the Southern African Customs Union (SACU) at dumped prices and the Commission was satisfied that there was a *prima facie* case of dumping, material injury, and or threat of material injury and causal link.

Subsequent to initiation, exporters and importers questionnaires were sent to various known interested parties for completion.

On 19 September 2006, the Commission received a letter from International Trade Services (ITS) on behalf of the Applicant requesting that the investigation against Brazil be terminated. The Applicant indicated in its letter that Owens Corning SA (Applicant) and Saint-Gobain Vidros SA-Divisao Vertrotex (the exporter) in Brazil are in discussions to merge as partners.

The Commission, therefore, decided to recommend to the Minister of Trade and Industry to terminate the investigation into the alleged dumping of chopped strand mats originating in or imported from Brazil.

The Commission's detailed reasons for its decision are set out in Commission Report No. 203 (Final determination).

Enquiries may be directed to the investigating officers, Mr Elias Tema at telephone (012) 394 3640, Mrs Porcia Makgopela at telephone at (012) 394 3630 or Mrs Dothodzo Kgomotso at telephone (012) 394 3671 or at fax (012) 395 0518.

DUST ELIMINATION AND CONTROL INITIATIVES DURING ROCK HANDLING – CURRENT SYSTEM IMPROVEMENTS AND POTENTIAL ALTERNATIVES

The Mine Health and Safety Council (MHSC) invites all dust-generating- and dust-control-equipment manufacturers and suppliers, as well as occupational-airborne-pollutant-control and elimination specialists, specifically referring to rock breaking and handling to attend a workshop, hosted by the SIM 03 06 03 Project Team.

Background

The Safety in Mines Research Advisory Committee (SIMRAC) is a partner in the World Health Organization/International Labour Organization (WHO/ILO) initiative for the global elimination of silicosis. Since its establishment in 1994, SIMRAC has funded numerous projects in dust measurement and control, but with the continued estimated prevalence of silicosis, and the compounding impact of tuberculosis, it has identified this preventable occupational disease as a major focus area for the South African mining industry.

In order to eliminate silicosis from the South African mining industry regional and national workshops conducted by SIMRAC identified three major areas of research that needs to be focused on. These are dust measurement and reporting, dust control, and human resource training.

Based on this project SIM 03 06 03 consists of three parts, namely:

- Part A: Dust Measurements and Reporting;
- Part B: Environmental Engineering/Dust Control; and
- Part C: Human Resources Training and Management

The most important intervention strategy for any occupational disease control programme is to eliminate or reduce the stressor at source, preventing exposure, and by doing so controlling it. This approach is a key factor of the national programme to eliminate silicosis from the South African mining industry. SIMRAC has targeted the identification and assessment of feasible and cost-effective environmental-control engineering and dust-control technologies as a research priority area for the silicosis control programme.

Purpose of the workshop:

- To inform dust-generating- and dust-control-equipment manufacturers and suppliers and occupational-airborne-pollutant-control and elimination specialists of the full extent and implications of the milestone set by the MHSC summit.
- To inform dust-generating- and dust-control-equipment manufacturers and suppliers and occupational-airborne-pollutant-control specialists of the scope of this multi-year project.
- To consider whether a national register should be set up of participating dust-generating- and dust-control-equipment manufacturers and suppliers and occupational-airborne-pollutant-control specialists.
- To identify and create a national database of current and emerging initiatives/technologies for dust elimination and control during rock breaking and handling in the mining industry.
- Discuss the formulation of a mining industry dust-elimination/reduction and control-efficiency testing working group and national standard.

Expected outcomes of the workshop:

Participants to provide advice, inputs and comments on:

- Establishment of a national database of dust-generating and dust-control-equipment manufacturers and suppliers and occupational-airborne-pollutant-control specialists to assist with project SIM 03 06 03, with specific focus on rock breaking and handling.
- Establishing the status of current and alternative dust elimination and control initiatives/technologies for rock breaking and handling in the mining industry.
- The establishment of a national database of current, alternative and new emerging initiatives/technologies for dust elimination and control during rock breaking and handling in the mining industry.
- Envisaged formulation of a mining industry working group and national standard for dust-elimination/reduction and control-efficiency testing.
